

BACKEND DEVELOPER

JAM just add music GmbH is looking for an experienced Backend Developer to join our agile team. We are the company behind Music Maker JAM, the #1 music creation app!

YOUR ROLE

The Backend Team at JAM is responsible for several databases and services that power multiple, highly successful products. We are growing this team by adding a Backend developer with a focus Rest APIs and payment infrastructure.

REQUIRED SKILLS

We assume that you have several years of relevant professional programming experience, however individuals with extreme talent will always be considered. You are capable of delivering well-structured code that finds the right balance between quick results and maintainability.

Required skills are:

- Successfully finished studies in informatics or similar fields. Alternatively, graduated as a qualified IT specialist with several years of work experience
- 3+ years of professional experience in developing backend interfaces for web and mobile applications by using object-oriented PHP
- Experienced in general-purposes programming languages such as Go (Golang)
- Profound knowledge with modern frameworks like symfony3 or similar
- Design and development of relational and non-relational databases i.e. MySQL and Redis
- Integration of cloud services like Amazon-S3, push providers
- Capable of taking on the technical responsibility for a product
- High sense of code quality and security
- Experience in teamwork and agile development, especially SCRUM

WE OFFER

- A friendly & transparent company culture with highly motivated colleagues
- An exciting and responsible role with great impact
- International workplace environment, creative atmosphere & results driven

Join our agile team and help us build truly disruptive musical services for the next generation of creators!
